

Assignment1

deni

September 2021

```
public bool isLeapYear(int year)
{
    if (year < 1582)
    {
        System.Console.WriteLine("The year must be greater than 1582");
        return false;
    }

    if ((year % 400 == 0)
    {
        return true;
    }
    return false;
}
```

Figure 1: isLeapYear method

The method here will first check if the input from the user is greater than 1582 which is stated as one of the requirements. If so we return false.

Afterwards we will be checking if the year is a leap year with a simple mathematical formula. If the year modulo 400 is equal to 0, then we know it is a leap year and we return true. In all other cases we simply return false.
